Liquid Solutions - Contraload Group Launches New Range of IBC Units

Belgium based Contraload Group (offices in the UK, Belgium, The Netherlands, France, Germany and Italy) has a new way of looking at Liquid Solutions and has therefore launched a brand new range of user friendly IBC units.

The group is best known in the B2B ingredient supply chain for its Pooling and Rental of plastic pallets to a wide portfolio of Blue Chip companies. The range of pallets is specially geared to the ingredient and packaging sectors that suit the demanding food safety requirements of today's supply chain. For Pooling solutions Contraload has Conditioning Services strategically positioned across Europe in addition to Contraload's own specialist unit in the Netherlands for hygienic washing of drums and IBC's.

Having launched IBC's into the fruit juice, concentrate and fruit puree markets in

2005 using the 'Arca Combo' 1,000 litre units and 200 litre plastic drums, Contraload is now expanding its range to fit the needs of its customers.

Liquid Solutions Concept

This year the LIQUID SOLUTIONS concept was launched in the UK/Ireland and on the Continent. Contraload claims to have the greenest bins and drums in the world thanks to the sustainable design, 100% recycling and controlled re-use through its online recovery system.

Studies have shown that the plastic drums can save up to 95% on CO2 as opposed to metal drums and be cheaper per movement at the same time, where the Contraload 1000 litre IBC's can save over 75% on CO2 as opposed to metal drums or alternative bins. With this new line, Contraload is aiming to support companies in transporting

liquids in a safer, greener and most importantly more cost effective manner.

New Range

The first newcomer of the extended range has been introduced in conjunction with Milford IBC. The Qube 1000 litre and Qube 500 litre based on the 1200 x 1000 and 1200 x 800 footprint respectively are geared to transport sauces, edible oils, egg and dairy products in either a rental or Pooling scenario. They provide major benefits of hygiene, stacking and product protection.

The second new bin is the EasyLiquid unit, with 1,000 and 1,250 litre capacity. An innovative development for long distance transport of liquids and long term storage, supplied on a sale-and-buy-back concept. These light weight (16 kg) units have proven to reduce flex cracking of the liner during

long transit and bring a big cost incentive. The unit is designed to be used without a pallet and ideal for container movements.

Liners

Liners are a very important part of the package and Contraload has teamed up with

industry leaders Qbig in the Netherlands who have developed a range of liners including aseptic and Free Flow Gusset liners to complete the user friendly package. These include a comprehensive range of filling and discharge valve options.

The range of units is available for demon-

stration and trial at clients own production facility so that the cost effective benefits can be assessed. For further information contact Nigel Davies - UK/IRL at Nigel.davies@contraload.co.uk or Andrew Wilson - EU Group at Andrew.wilson@contraload.com, Telephone +44 121 270 1007.
